

SAI KESHAVA REDDY CHINTHALA

Azure DevOps Engineer

Hyderabad, India.

saikeshavareddy@gmail.com

+91 7729066003 | [Linkedin/SaiKeshava](#)

PROFESSIONAL SUMMARY

Tech-driven DevOps Engineer with proven experience in cloud infrastructure, automation, and deployment strategies. Skilled in managing cloud-based applications on AWS, optimizing resource utilization, and ensuring enterprise-grade security and scalability. Passionate about streamlining workflows, implementing robust CI/CD pipelines, and leveraging modern DevOps tools to enhance system reliability, operational efficiency, and cross-functional collaboration.

TECHNICAL SKILLS

- **Cloud & Infrastructure:** AWS (EC2, S3, IAM, RDS, CloudWatch, VPC), Docker, Kubernetes, Terraform
- **CI/CD & Automation:** Jenkins, GitHub Actions, Ansible
- **Version Control & Scripting:** Git, Bash, Python
- **Operating Systems:** Linux (Ubuntu, CentOS), Windows
- **Monitoring & Logging:** Grafana, Prometheus, CloudWatch Logs, Uptime Robot
- **Networking & Security:** Nginx, Firewalls, SSL/TLS, IAM Policies

PROFESSIONAL EXPERIENCE

Nexiotron India Pvt Ltd | Hyderabad, India | *Azure DevOps Engineer* | Nov 2025 – Present

- Spearhead the design, implementation, and maintenance of highly available cloud architectures on Azure, aligning infrastructure with application development lifecycles.
- Automate complex application deployments and infrastructure provisioning utilizing Terraform and advanced CI/CD pipelines (Azure Pipelines and Azure DevOps), significantly increasing deployment frequency.
- Collaborate with cross-functional development teams to containerize modern web applications (including React/Django/Next.js stacks) using Docker and manage orchestration.

Atya Technologies Pvt. Ltd. | Hyderabad, India | *AWS DevOps Engineer* | Jun 2024 – Oct 2025

- Designed and executed automated CI/CD pipelines using Jenkins and GitHub Actions, successfully reducing deployment times by 40%.
- Managed AWS infrastructure, optimizing EC2 instance usage and implementing cost-saving measures that reduced monthly cloud expenditures by 25%.
- Configured Nginx as a reverse proxy for secure application routing and load balancing, improving overall application performance by 30%.
- Automated infrastructure provisioning from scratch using Terraform, cutting manual setup time by 60%.
- Deployed comprehensive monitoring and alerting solutions using Prometheus and Grafana, drastically enhancing system observability and incident response.

KEY PROJECTS

DevOps SaaS Platform Infrastructure Setup (End-to-End)

Nov 2025 – Present

- **Overview:** Architected and deployed a scalable, multi-tenant DevOps Software-as-a-Service (SaaS) platform from scratch to automate client deployments.
- **Infrastructure & IaC:** Provisioned foundational AWS resources (VPC, EC2, RDS) using Terraform to ensure reproducible and version-controlled infrastructure.
- **Automation & Deployment:** Built zero-downtime CI/CD pipelines utilizing GitHub Actions, integrating automated testing and seamless containerized deployments via Docker.
- **Outcome:** Delivered a secure, highly available platform that accelerated user onboarding and centralized cloud infrastructure management.

Scalable Web Application with React and Django

Dec 2024

- **Architecture & Hosting:** Built a full-stack IoT data management app utilizing Docker for containerized consistency, AWS EC2 for backend hosting, and Amazon RDS for database management.
- **Scalability & CI/CD:** Configured AWS Application Load Balancers and auto-scaling groups for optimal performance during traffic spikes, driven by automated Jenkins integration pipelines.

- **Monitoring:** Enforced AWS CloudWatch and Sentry for real-time error tracking, enabling proactive performance optimization and a seamless user experience.

Scalable Dash Application for IoT Monitoring

Sep 2024 – Oct 2024

- **Deployment:** Leveraged AWS Elastic Beanstalk for the deployment of a real-time data visualization web app, reducing standard deployment time by 30%.
- **Automation & Scaling:** Established continuous integration pipelines with AWS CodePipeline and CodeDeploy, supported by auto-scaling configurations that achieved 40% performance gains during peak usage.

Secure Django Application Hosted in a VPS | Jul 2024

- **Deployment & Security:** Hosted a robust content management system on a dedicated VPS using PostgreSQL. Implemented SSH access, automated deployment scripts, and strict firewall rules.
- **Performance:** Enforced Nginx as a reverse proxy to optimize traffic management and set up Uptime Robot for continuous availability tracking.

EDUCATION

Bachelor of Technology in Electrical and Electronics Engineering

Kamala Institute of Technology and Science

Jul 2020 – Aug 2023

CGPA: 6.91

Diploma in Electrical and Electronics Engineering

Jyothishmati Institute of Technology and Sciences

Apr 2017 – Jun 2020

Percentage: 77.71%
